Note: Part numbers followed by a "B" indicates that there was a nozzle that was introduced before vacuum pick-up became available on Hakko's hot air stations. These nozzles with the same number but without a "B", are also considered under the Old Nozzles column but they will not work with the vacuum pick-up feature.

2 = New B5045 Pipe: The new pipe is on FR-810 units that had the pipes repaired or replaced with the new specification of the pipe. The FR-810B and FR-811 have the new specification on all of their units.

3 = 851 Nozzles: The 851 uses a different nozzle than the other units and only 851 series nozzles are compatible.
