

Is there a way to put an offset adjustment on the FP-102 soldering iron?

The FP-102 station does not have temperature adjustment or offsetting capability. The station has four heat ranges that provide approximate temperatures of 650°F, 700°, 750°, and 800°F depending on the selected heat range setting (Green, Yellow, Blue, or Red). For most tips in the T15 series the measured temperature will be within 50°F of the selected heat range.
