

Why do the dimensions on my CHP hand tools look different?

To ensure the quality of our product, all CHP tools are hand crafted, therefore the length can't be guaranteed and a difference of $\pm 3\text{mm}$ is normal. The variations in the finish and slight deformation of the pointed end are also normal part of the finishing process. All variations will not affect tool quality and performance.

If you have any question or concern regarding your CHP hand tools, please contact our customer service at 1-800-88-HAKKO(42556) or visit our website at www.hakkousa.com
