

What milling bits are compatible with my CHP DPF-300 Depaneling System?

The DPF-300 uses an ER11 collet for 1/8" shank milling bits. The spindle includes a 3mm x 10mm spacer at the bottom to ensure the milling bit is the proper height in the guide. You can use any 1/8" shank milling bit that has an overall length of no more than 38mm.
